

Khalid Girma

FULL-STACK DEVELOPER

Addis Ababa, Ethiopia | +251-903146834 | khalidgirma3@gmail.com | GitHub: github.com/khalidGir

PROFESSIONAL SUMMARY

Passionate and problem-solving Full-Stack Developer with a comprehensive background engineering scalable web applications from scratch and optimizing high-load platforms. Strong proficiency across the entire TypeScript stack, utilizing React and Next.js (SSR/SSG, complex routing, state management) to develop responsive, high-performance frontends alongside efficient Node.js server services (NestJS/Express). Adept at designing resilient database schemas (SQL/NoSQL), writing clean, testable code, and implementing modern Docker and cloud deployment workflows within collaborative team environments.

TECHNICAL STACK & COMPETENCIES

Frontend Architecture	React, Next.js (SSR, SSG, App/Pages Routing), JavaScript, TypeScript, Responsive UI Design
Backend Services	Node.js, NestJS, Express, TypeScript, RESTful APIs, WebSockets, State-Machine Logic
Databases & Tooling	SQL (PostgreSQL, MySQL), NoSQL, Git Version Control, Database Schema Design & Optimization
DevOps & Workflows	Docker, Containerization, Cloud Deployment Workflows, AWS Environment Management, n8n Pipelines
Software Standards	Clean Code Practices, Deep System Troubleshooting & Debugging, Testable Code Architecture, Technical SOPs

PROFESSIONAL EXPERIENCE

Full-Stack Engineer — StartupAgile	Current
- Design, build, and maintain efficient, reusable, and reliable backend microservices utilizing Node.js and TypeScript, increasing structural modularity. - Optimize existing multi-tenant platforms for maximum speed and scalability, modifying complex SQL/NoSQL database configurations to cut cross-system retrieval latencies by 40%. - Write clean, well-documented, and testable codebase arrays, employing modern CLI-driven development environments (OpenCode CLI, Aider) to validate strict functional rules. - Collaborate within agile teams to map feature definitions, execute Git-driven version control, and integrate robust data parameters from conception to deployment.	
Full-Stack Systems Specialist — Syntax Software Solutions	Contract (4 Months)
- Developed high-quality, responsive user interfaces and interactive dashboards utilizing React and Next.js, mapping clean layout parameters to handle data-heavy views. - Engineered event-driven asynchronous pipelines and real-time backend updates via n8n automation, reducing manual data-entry tracking tasks by 60%. - Authored deep system architecture playbooks and standard technical documentation, smoothing cross-team collaboration and accelerating onboarding cycles.	
Technical Solutions Reviewer (Internship) — ConDigital	Past Term
- Troubleshoot, debugged, and upgraded software configurations across enterprise networks, executing systematic component testing for Odoo and HubSpot platforms. - Isolated UI navigation blocks and logical database inconsistencies, documenting clear, actionable diagnostic briefs for the engineering squad.	

HIGHLIGHTED FULL-STACK PROJECTS

Tap Trade Broker Platform (Fintech Engine)

Node.js, TypeScript, OKX & Hyperliquid APIs, WebSockets, Next.js

- Built a low-latency financial service router from scratch, establishing secure cryptographic authentication layers, custom API validation pathways, and live data stream sync.

The Tanker Marketplace (Logistics Ecosystem)

React/Next.js, Node.js API, Flutter Mobile Framework, Google Stitch

- Co-designed a multi-actor platform coordinating three distinct user environments, crafting clean state mutations and responsive layouts to maintain absolute visibility across distributed client types.

ETU Sugar Corporation — Internal Enterprise Tool

Python, Node.js Modules, PostgreSQL, Secure Role Permissions Matrix

- Integrated custom permission settings, data tables, and multi-role rules within a centralized database platform to handle secure communications and information displays.

EDUCATION & CREDENTIALS

BSc Degree in Information Systems — Specialized University Program

Graduated

- Core Emphasis: Advanced Software Engineering Principles, Relational Database Management Systems, System Analysis and Interface Layout Architecture.
- **Community:** Active contributor within local technical community assemblies including GDG Addis (DevFest), collaborating on optimal framework trends and architecture models.
